

`within`

training animals · single-animal populations

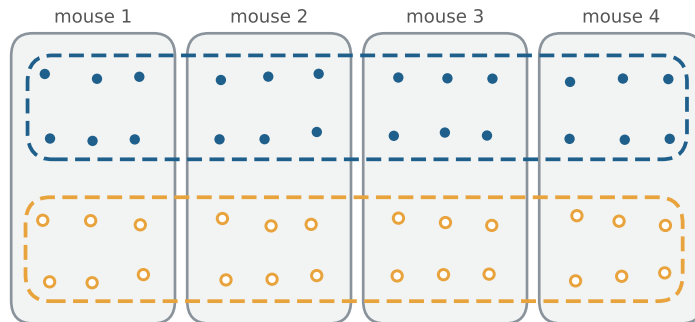

training population

test population

`pooledwithin`

training animals · mixed populations

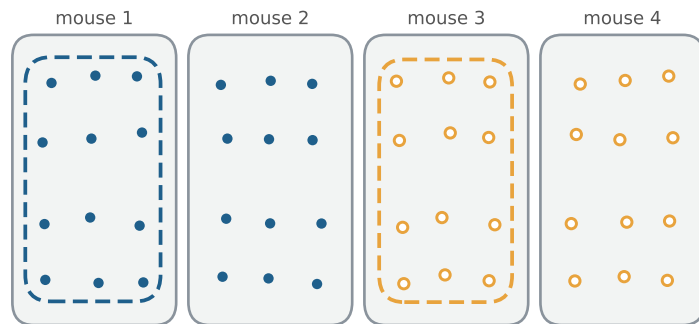

training population (all mice, training neurons)

test population (all mice, test neurons)

`cross`

held-out animals · single-animal populations

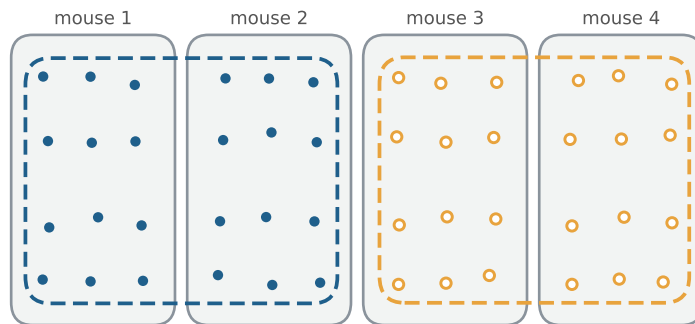

training population

test population

`pooledcross`

held-out animals · mixed populations

training population (training mice)

test population (held-out mice)

filled = training neurons (labels are targets) · hollow = test neurons (scored; never used for training or model selection) · dashed box = one sampled population, the unit the Gram is computed on
